Intaver Institute and SNA-Software Release

Intaver Institute Inc. and Safran North America LLC today announced that they have developed seamless integration between SNA's flagship EVM solution Proteus Envision and Intaver's project risk analysis and project risk management software RiskyProject.

The Proteus-RiskyProject integration allows SNA to provide a complete and seamless Earned Value and Risk Management solution to its clients. Users will be able run a comprehensive Cost and Schedule risk analysis using their UN/CEFACT project data. This solution will provide comprehensive support for program management guidelines recently released by PARCA.

"This integrated solution of RiskyProject and Proteus is an important development for Intaver. SNA Software provides a leading project management solution for the Aerospace and Defence industries, an area that we have been closely involved with for several years", said. Michael Trumper, business development manager of Intaver Institute. "By integrating with SNA's Proteus Envision, we will be able to provide the Aerospace and Defence industry a best in class solution for their program risk management needs."

"We are very pleased to announce this new level of compatibility with Intaver's RiskyProject," said Nicholas Pisano, President and CEO of SNA Software LLC. "Project risk assessment is a key and essential aspect of project management and is mandatory under best business practices as applied by those companies and organizations investing in research and development, exploration and business development projects. For those government and defense industry companies that are moving to open systems, the DCARC UN/CEFACT XML schema, and toward the Integrated Program Management Reporting (IPMR) environment, you will now have the ability to incorporate risk analysis and management data as an integral aspect of project performance assessment regardless of the source of the underlying scheduling data."

About Intaver Institute

Intaver Institute Inc. is a leading innovator in the field of project risk management and risk analysis software, offering our clients unique, cost effective software solutions to their project and portfolio management challenges. Intaver Institute is dedicated to advancing and adding to our Event Chain Methodology.
